With being **the first minibar manufacturer** in Turkey, Elektromarla has determined its policy to maintain its leading position in the sector and to provide customer satisfaction-oriented service.

Pioneer in the industry

Since 1954, Elektromarla has been the first “minibar factory” and the first company that imported and exported minibars in Turkey. Elektromarla has been a pioneer in the industry since its foundation and specialized in the field of absorption system for 70 years which is the solution partner for hotels, hospitals, yachts, and caravans.

Product variety & quality

Elektromarla, which has been carved in memory with its product variety and quality in the hotel equipments sector, always works with customer satisfaction oriented focus during its production. Elektromarla, which is preferred by the hotels and hospitals of the highest quality in the sector, develops itself on an international vision by minibar design and production.

*Pleased and proud to have become
a world brand with our **customer satisfaction,**
innovative design & high quality
production as Elektromarla.*

Our Highlights

Customer Focus

Prioritize providing valuable services to our customers.

Eco-friendly products

Reduce the electricity consumption.

High-quality

Proof of our 70 years of experience.

Local Production

Based and Manufactured in Istanbul, Turkey.

Perfect **INSTALLATION**

All miniBar - miniRefrigerators can be integrated into suitable furniture. But it is important to provide appropriate ventilation. The air intake and exhaust openings must be at least 300 cm² each. It is essential to make sure that the ventilation screen cannot be closed or covered.

IMPORTANT: Absorption system miniBars do not function optimally if the room temperature is over 32°C. The ideal room temperature should be between 20°C - 25°C. Climatized environment is recommended.

Correct Installations

INVERTER MINIBAR

Since it is an inverter compressor, **it reduces the minibar electricity costs by 90%**. Inverter Compressor Minibars work with 26-29 dB sound level (which is a very low level of noise) and provide much better cooling in hot outdoor environments compared to Absorption System Minibars.

Absorption System

Absorption Minibars are noiseless and vibrationless minibars which is the biggest reason that they are preferred by the hotels and hospitals. In this system, there is no mechanical equipment is used so it is completely silent and vibration free. Absorption System Minibars can cool between +4 to +14 degrees at ambient temperatures of +16 to +32 degrees. The cooling performance is calculated with DELTA-T constant value.

Inverter System

The Inverter Compressor System Minibars works with a BLDC motor and it has an algorithm that detects the need for cooling. The biggest advantage of this system is its very low electricity consumption. This system has A+++ energy label. Inverter System Minibars provide 90% less electricity consumption than Absorption System Minibars. The compressor makes 26 dB noise during start-stops, which is a very low level of noise and accepted by hotels.

Termoelectric Peltier System

Thermoelectric Peltier Minibar provides completely silent cooling (0 dB) without any vibrations since they do not have any compressors nor fans. They are also remarkable in terms of saving 70% less energy with their high technical performance when compared to Absorption System Minibars.

HOTEL **SAFES**

Hotel safes provide best protection against the threat of unforeseeable burglary attack. They are built to accommodate the most commonly stored items with ease, such as laptops, hard drives & jewellery.

FEATURES

Can be installed into a drawer with a damper kit.

Able to work with 3-6 digit user code.

Possibility of opening the safe 6 digits master code.

When the batteries run out, it is possible to open the safe with emergency unit (CEU) or with mechanical passkey from the outside.

15 min. self-blocking after 4 wrong operation. (Fine mode can be disabled.)

Fine mode can be adjusted as 15, 30, 45 and 60 minutes.

Low battery consumption with servo motor.

Works with 4 x 1,5V alkaline battery.

Possibility of hiring out the safe with a magnetic switch (Optional).

The last 100 operation can be printed out only in 1220 models (process, time, date, password).

Optional plug and cable connection inside the safe. (Especially for laptop size safes)

Motion-sensor lightning system is available inside the safe. (Only for MS models.)

Electrostatic power paint with different color options.

The first part of the document discusses the importance of maintaining accurate records in a business setting. It highlights how proper record-keeping can help in decision-making, legal compliance, and financial management. The text emphasizes that records should be organized, up-to-date, and easily accessible.

Next, the document addresses the challenges of data management in the digital age. It notes that while digital storage offers convenience, it also introduces risks such as data loss, security breaches, and information overload. Solutions like cloud storage, encryption, and regular backups are suggested to mitigate these risks.

The third section focuses on the role of technology in streamlining business processes. It describes how automation tools can reduce manual errors and save time. Examples include using software for invoicing, inventory tracking, and customer relationship management. The text encourages businesses to invest in technology that aligns with their operational needs.

Finally, the document concludes by stressing the importance of employee training and awareness. It suggests that regular training sessions can help employees understand the value of data and the correct procedures for handling information. This, in turn, can lead to more efficient and secure business operations.
